

# Inventrack3000

## Mobile RFID Inventory Control System

Inventrack3000 is a mobile application harnessing the RFID technology to improve inventory tracking and control. An electronic stock card using RFID has replaced existing manual stock tracking card system. Data can be updated online to the electronic stock card. Inventory information can be obtained immediately at your fingertips. Use Inventrack3000 now for a more efficient inventory management.

## How Inventrack3000 works?

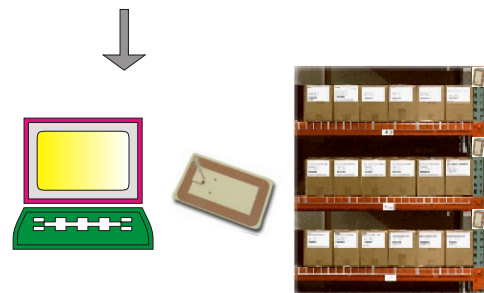

### RFID STOCK CARD

RFID stock card stores various information such as product no, product type, quantity remaining, audit trail of stock taking and many others.

### CARD REGISTRATION STATION

New RFID stock card will be registered into the system. Once registered, the new card is placed on the shelf or product location in the warehouse.

### INVENTRACK RFID READER

Mobile RFID reader is used to enter input/output stock information into the RFID stock card. Data is captured and stored in the database on the mobile reader. Delivery Order can be generated based on stock output information.

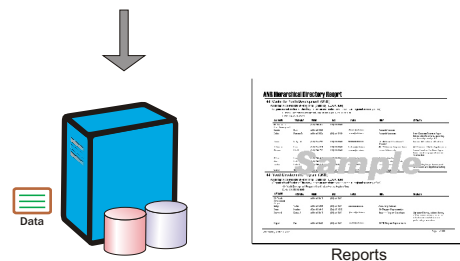

### BACK-END PROCESSING

Data captured from the RFID reader will be uploaded to database server for further processing.

Reports can be generated based on the information captured.

Inventrack3000 supports Oracle, MS-SQL Server, SAP applications and many others

## System Requirements

- Pentium III 733 MHz or above
- 256 MB RAM
- 200 MB of Hard disk space for application
- >1G of Hard disk space for database and storage
- Platform: Windows CE or Pocket PC
- Microsoft Windows 2000 or Windows XP
- .NET Framework 1.1 or above
